Workbench Display — QR Samples

Each QR encodes a full **ISO-15434** label payload, exactly as the **Zebra DS3678** emits it (82301 is the client's real string). The server reads the 5-digit group after the P data identifier to choose the spec image shown here. On the live line the DS3678 feeds the display over the serial splitter; to test here, scan a code with a phone barcode-scanner-keyboard app into the **/station/WB-01** window, or print this sheet.

- Valid part — shows its workbench spec
- Error path — exercises the alert flash
